ABSTRACT

Sex and age group expanding human populations that are involved in various geographical areas of the world are living. Today, this phenomenon has become a problem for the government. However, increasing the population by itself is not the problem; the needs are of the view that governments inevitably create great difficulty. Tangible result of population growth in the developing world, especially the part that we live in the Middle East, bringing issues such as unemployment, rapid urbanization, Lower level of public health, the loss of agricultural land, shrinking resources disorient regulatory environment and large-scale migrations of people abroad are included (SHEIKHI, 2005: 35). Thus, fertility and population size is an important factor in making the change, must be examined from different aspects and related studies, it is considered as one of the most important studies, so as to achieve a good solution to reduce the problem. The aim of the present study was to investigate the factors affecting attitudes about family policy, fertility and population growth in the city of Ahvaz is the research unit of observation is the individual. The population of this study consists of all married women at least once in Ahwaz. In this study, 0.95 is considered, therefore CI 96.1 respectively. Potential in the present study 0.05 is considered. Population size (36,854 people) and the sample size is calculated according to the formula derived from the above formula that the figure is 370. In this study, a questionnaire was used to measure the concepts and variables. After collecting the data in SPSS were reviewed and analyzed. Statistical methods for data analysis, hypothesis testing and test process models of T-Test, Test F, Pearson test, multivariate regression analysis was used The findings come in two parts: a description of communication that would indicate Parents whose sexual preference is an important factor that affects the parents' sex composition of children. Parents emphasized to achieve proper sex composition of children, fertility is increased disposition. Seems to be to change the perspective of the social strata in this area can be considered a good advertising program.

KEYWORDS: Family attitudes, fertility policy, increase fertility.
